

How to Enable the Ensign Charting Software in your online Cannon Account

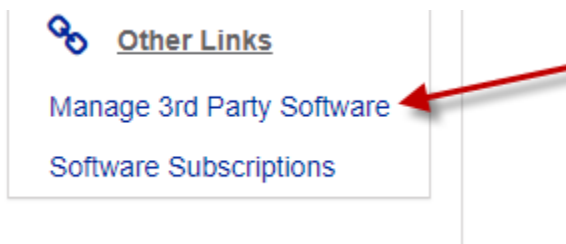

The market data connection to Ensign (from your Cannon account) needs to be activated in your online Cannon account. This is a very important step, and Ensign will not connect to your account and receive live data from the CME if this step is not done.

To enable the connection to the Ensign Charting Software, first, login to your online Cannon account, then on the Home page click the 'Other Links' on the right-hand menu list.

The screenshot shows the e-futures.com website interface. At the top left is the logo "e-futures.com by cannon" with a globe icon. Below the logo is a blue header bar. The main content area is titled "My Account > Home". On the left side, there is a "CME Market Data" button, a section for "Account Applications" with a "Futures" status indicating approval, and an "Updates" section with links to download the GAIN iBroker app for Android (Google Play) and iPhone/iPad (App Store), and a "Market Data Subscriptions" section. On the right side, there is a navigation menu titled "(Logout)" with options: "My Account", "Home", "My Profile", "Download Software", "Credit Card Transactions (0)", "Contact Support", "Reports", "iBroker WEB", "1099 Delivery Preference", "Futures", "Real-time Simulation", "Research", and "Other Links". A red arrow points from the "Other Links" option in the menu to the "Manage 3rd Party Software" link in the subsequent screenshot.

Then click the 'Manage 3rd Party Software' link...that will appear under 'Other Links'.

This is a close-up of the "Other Links" section of the user interface. It features a blue chain-link icon followed by the text "Other Links". Below this, there are two links: "Manage 3rd Party Software" and "Software Subscriptions". A red arrow points from the right towards the "Manage 3rd Party Software" link.

The following screen will appear. Find the row for 'Ensign Charting Software' and then click the '+' plus sign under the 'Action' column to enable 'Ensign Charting Software'. The '+' sign will then change to a '-' minus sign and the row will turn green to indicate that you have enabled the software in your Cannon account.

Enabling the Ensign Charting Software permits your Cannon account to feed live data from the exchanges to the Ensign charting software. If this step is not done, then Ensign will not be able to connect and receive live data. If the row is green then you have successfully enabled Ensign for your Cannon account.
